Safety Footwear	38 - 43
Healthcare Supplies	44 - 47

slip-resistant pattern on palm offers good wet and dry grip!

Hands are vulnerable to a wide range of hazards in the work place including: cuts, blows, chemical attacks and extreme temperatures. With new industry manufacturing and handling processes involving these hazards there is a growing need for the use of "job fitted" gloves that meets each user's specific requirements.

conforms to the EC Food Directive

Hand Protection Legislation

The general requirements of the European Protective Equipment Directive, 89/686/EEC, have been in force since 1995. This directive requires all protective gloves to be CE marked. The format of the CE mark depends on the category that applies to the glove.

Category 1 - Simple Design

Provides protection for minimal risk only - for use in areas where the risk is low and where effects of not wearing hand protection are easily reversible or superficial.

Category 2 - Intermediate Design

Covers other risks that are not defined by categories 1 and 3.

Category 3 - Complex Design

Gloves that protect against risks that could result in irreversible injury or mortal danger.

General Requirements of EN420

EN420 defines the general requirements for most types of protective gloves:

- Product and packaging information and marking
- Design and construction
- Fitness for the purpose
- Sizing
- Comfort and efficiency
- Innocuousness
- Storage

The higher the score, the better the performance. 0 represents a fail - X denotes no test was carried out.

Chemical and Micro-Organism EN374	Rating
EN374-2 Resistance to penetration by micro-organisms. Referred to as acceptable quality level (AQL).	1-3
EN374-3 Resistance to chemical hazards (permeation)	1-6
Mechanical Hazards EN388	Rating
a) Resistance to abrasion	0-4
b) Blade cut resistance	0-5
c) Tear resistance	0-4
d) Puncture resistance	0-4
Protection from Cold EN511	Rating
a) Resistance to convection cold	0-4
b) Resistance to contact cold	0-4
c) Permeability to water	0-1
Thermal Hazards (Heat and/or Fire) EN407	Rating
a) Burning behaviour	0-4
b) Contact heat	0-4
c) Convection heat	0-4
d) Radiant heat	0-4
e) Small splashes of molten metal	0-4
f) Large splashes of molten metal	0-4

A. Yellow Rubber Gloves

- Lightweight flock lined natural rubber glove
- Slip-resistant pattern on palm offers good wet and dry grip
- Rolled cuff for extra strength and prevention of liquid roll back
- Flock lining absorbs perspiration and keeps hands cool
- Suitable for food handling, cleaning and dish washing

Code	Size	Pkd
883565	Medium	1 pair
390042	Large	1 pair
378644	Medium	12 pairs
378652	Large	12 pairs

B. Blue Rubber Gloves

- CE categorised as CE Simple Design - for minimal risk only and conforms to the EC Food Directive EC/1935/2004

Code	Size	Pkd
174028	Medium	6 pairs

A. Clear Vinyl Gloves

Clear Vinyl Gloves Powdered

- CE categorised as CE Simple Design - for minimal risk only and conforms to the EC Food Directive EC/1935 2004
- Suitable for use in a food hygiene environment

Clear Vinyl Gloves Powder-free

- Disposable gloves
- No latex proteins - eliminates protein sensitisation
- Rolled cuff for additional strength and prevention of roll back
- Protection against contamination, dirt and irritants in low risk situations

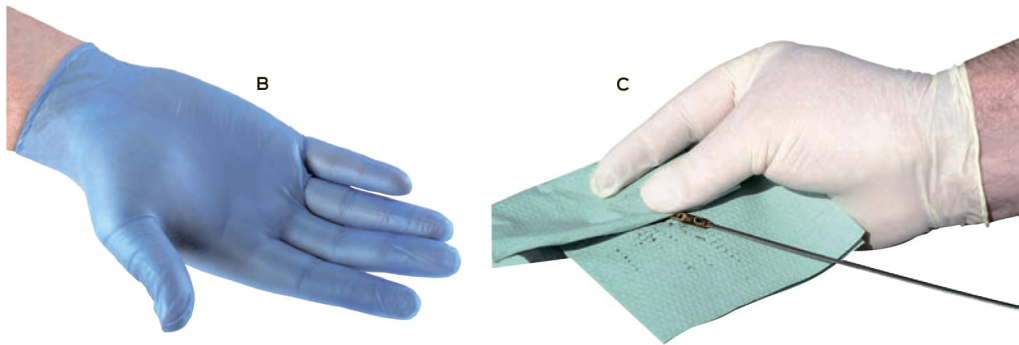

Code	Size	Pkd
Powdered		
830461	Small	50 pairs

4018353	Small	50 pairs
558081	Medium	50 pairs
558098	Large	50 pairs
4004740	Extra Large	50 pairs

D. Polyco Digit Gloves

- Powder-free polythene disposable gloves, reducing risk of contamination
- Textured surface improves grip
- Food safe

Code	Pkd
378685	50 pairs

E. Polythene Disposable Gloves

- CE categorised as CE Simple Design - for minimal risk only and conforms to the EC Food Directive EC/1935 2004

Code	Size	Pkd
4002860	Medium	50 pairs

A. Nitrile Blue Disposable Gloves

- Advanced nitrile technology provides an exceptionally soft and pliable material
- No latex proteins eliminates protein sensitisation
- Free from residual accelerators, a cause of allergic dermatitis
- Ambidextrous and unique shape delivers a glove with improved fit

Code	Size	Pkd
Powdered		
4018376	Small	50 pairs
4018382	Medium	50 pairs
4018395	Large	50 pairs
125037	Extra Large	50 pairs

378514	Large	50 pairs
4004793	Extra Large	50 pairs

B. Polycy Bodyguards NITRILE Black Powder-free Exam Gloves

- Better puncture and abrasion resistance than natural rubber or vinyl
- Ideal for those who are sensitised to latex
- Rolled cuff for additional strength and prevention of liquid roll back

Code	Size	Pkd
378548	Medium	50 pairs
378555	Large	50 pairs

C. KLEENGUARD* G10 Nitrile Gloves - Arctic Blue

- CE categorised as CE Simple Design - for minimal risk only and conform to the EC Food Directive EC/1935/2004
- Beaded cuff, maximum touch sensitivity, comfort and flexibility
- 0.05mm thickness
- Powder-free and natural rubber (latex)-free
- Textured fingertips for better grip
- PPE category 1 (CE simple) and approved for food contact

Code	Size	Pkd
165591	Medium	50 pairs
165608	Large	50 pairs

D. Medical Grade Nitrile Gloves

- Made of a soft but tough stretchy nitrile material
- Very strong and a high quality flexible glove
- Latex-free reducing the risk of hypersensitivity and allergic reactions
- Low in residual chemicals to reduce the risk of contact dermatitis associated with these chemicals

Code	Size	Pkd
4017988	Small	100 pairs
4018094	Medium	100 pairs
4018266	Large	100 pairs

E. Microporous Sleeve

- Cover type 6 splash protection
- One size fits all

Code	Pkd
376768	25 pairs

F. Juba Ambidextrous Extra-strong Nitrile Gloves

- Patented double sided grip on palm and back and also inside for extra traction
- Ambidextrous - can be worn on either hand
- No protein allergy issues
- Food safe
- Chemical Resistant
- Fits underneath oversleeves
- 100% nitrile
- No latex

Code	Size	Pkd
124868	8	12 pairs
124976	9	12 pairs

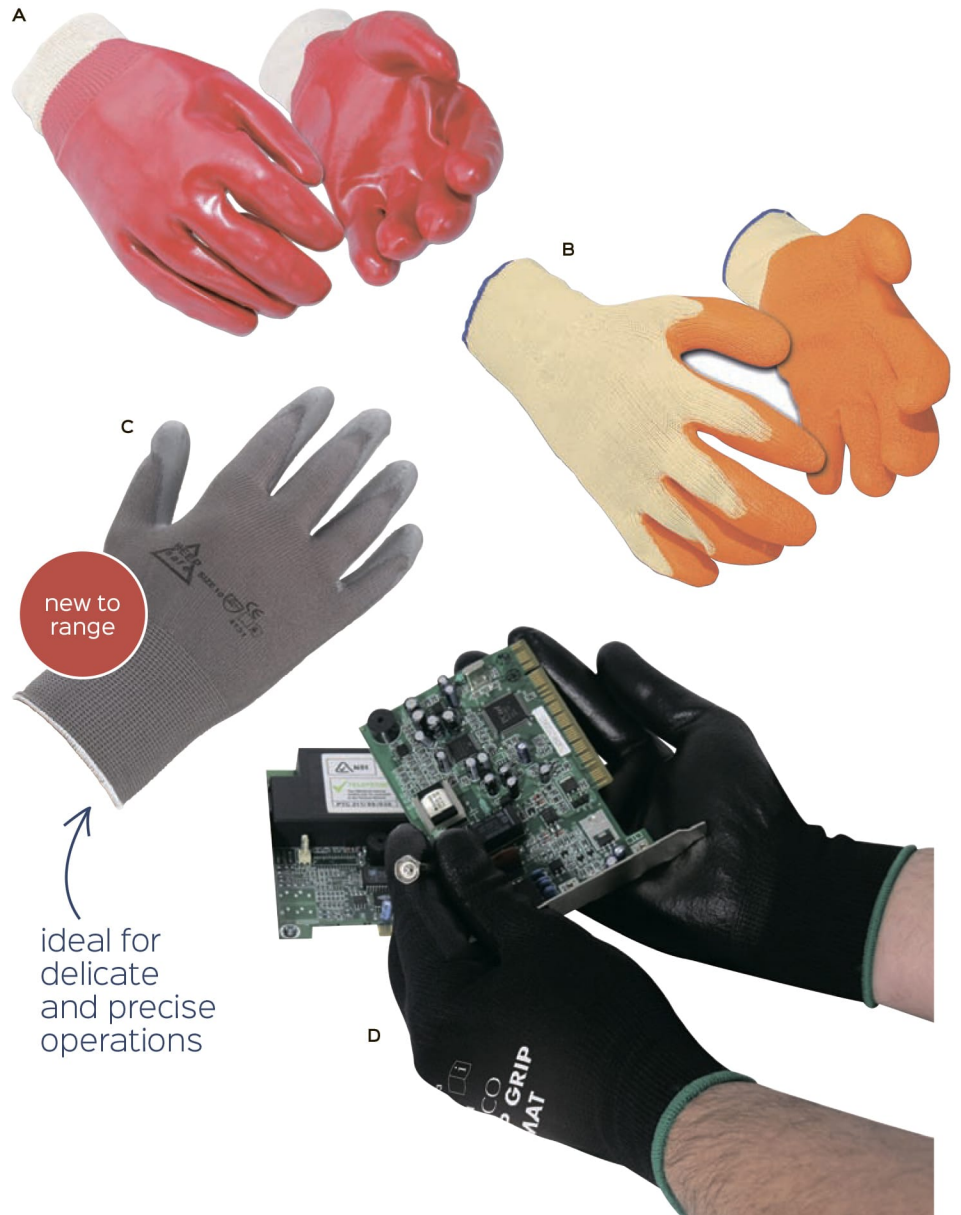

G. Disposable Blue Overshoes

Code	Size	Pkd
4018400	14 inches	1000 pairs
4018416	16 inches	1000 pairs

H. Disposable White Overshoes

- Microporous polypropylene fabric
- Type 6 (PB), EN13034 limited splash protection
- One size

Code	Pkd
376742	25 pairs

A. Red PVC Knitwrist Gloves

- Fully dipped working gloves with knitted wrist and cotton interlock lining have a smooth finish with excellent abrasion resistance
- Cotton and PVC
- Conform to standards EN420 and EN388
- Packed 12 pairs

Code	Size
374988	Large

B. Orange Grip Latex Gloves

- Seamless poly-cotton 10 gauge liner and knitwrist design eliminate bulky, uncomfortable seams, providing a better fit and breathability
- Polyester cotton and latex offer comfort and grip
- Comply to standards EN420 and EN388
- Packed 12 pairs

Code	Size
374954	Medium
886327	Large

C. Pu Palm Coated Gloves

- Ideal for packing, inspection, fine component assembly, delicate and precise operations
- Seamless liner - no seams against worker's hand
- Excellent levels of dexterity

Code	Size
124852	8
124961	9

D. Polyco Matrix P Grip Gloves

- Seamless knitted shell with a polyurethane palm coating
- Open-back style allows hand to breath
- Tight fitting for maximum dexterity
- CE marked

Code	Size	Pkd
378588	8	12
378596	9	12
4004900	10	1

E. Juba Nitrile Foam Gloves

- Econit nitrile foam coated gloves
- Excellent grip in dry, wet and oily conditions
- Nitrile foam channels oils and liquids away from surface
- 15 gauge nylon and lycra liner for maximum ergonomoy
- Excellent resistance to abrasion

Code	Size
124854	8
124962	9

Wonder Grip gloves have a sponge-like form that create a suction effect much like octopus suction disks!

The complete safety solution

Why choose 3M?

As one of the world's leading suppliers of Personal Protective Equipment our goal is to ensure that we satisfy your needs through the provision of exceptional leadership, expertise, quality and service excellence.

We believe that health and safety is first and foremost about safeguarding worker welfare. A secure, safe working environment is paramount in any business. But we also believe that improving worker protection, comfort and productivity is a more ambitious goal. One we firmly believe in.

By working in association with skilled safety practitioners, partners and customers, our people are committed to ensuring that we help you create an environment that protects your workforce - effectively, efficiently and economically.

3M™ Fit Testing Service

Do you have workers who wear tight fitting respirators that rely on a seal with the face such as Disposable, Half Mask or Full Face Masks (including those fitted to a powered respirator)?

3M can offer both Qualitative and Quantitative Fit Testing

The 3M Fit Testing Service is provided by Fit2Fit accredited personnel on the employers site at a day/time suitable to the employer. The Fit2Fit accreditation scheme is a BSIF initiative supported by the HSE which ensures fit testers can conduct a fit test to the level of competence required in the HSE guidance note 282/28. Fit testing will be conducted in a professional and friendly manner which is important when coaching and reassuring employees.

the 3M™ Peltor™ X1 Ear Defenders offer protection against light industry noise, for example, grounds maintenance or power drilling

Peltor™

B. 3M™ Peltor™ Ear Defenders - A new standard in design, comfort and protection

Peltor™ X1 - SNR 27db
• The 3M™ Peltor™ X1 Ear Defenders offer protection against light industry noise. For example, grounds maintenance or power drilling
• Moderate attenuation (SNR 27dB) that meets the needs of most industrial applications
124900

Peltor™ X2 - SNR 31db
• The 3M™ Peltor™ X2 Ear Defenders offer protection against moderate to high noise levels. For example, roadworks or construction
• High attenuation (SNR 31dB) that meets the needs of most industrial applications
124902

Peltor™ X3 - SNR 33db
• The 3M™ Peltor™ X3 Ear Defenders offer protection against high noise levels. For example, forestry or heavy engineering
• High attenuation (SNR 33dB)
124903

Peltor™ X4 - SNR 33db
• The 3M™ Peltor™ X4 Ear Defenders offer protection against high noise levels, whilst maintaining a sleek, low profile
• High attenuation (SNR 33dB)
124906

Peltor™ X5 - SNR 37db
• The 3M Peltor X5 Ear Defenders offer protection against extremely high noise levels. For example, airports, quarrying or paper mills.
• Unparalleled attenuation (SNR 37dB)
124908

Hearing Protection

HSE Control of Noise at Work Regulations

The Control of Noise at Work Regulations 2005 came into force for all industry sectors in Great Britain on 6th April 2006 (except for the music and entertainment sectors where they came into force on 6th April 2008). The aim of the Noise Regulations is to ensure that workers' hearing is protected from excessive noise at their place of work, which could cause them to lose their hearing and/or to suffer from tinnitus (permanent ringing in the ears).

The level at which employers must provide hearing protection and hearing protection zones is now 85 decibels (daily or weekly average exposure) and the level at which employers must assess the risk to workers' health and provide them with information and training is now 80 decibels. There is also an exposure limit value of 87 decibels, taking account of any reduction in exposure provided by hearing protection, above which workers must not be exposed.

More information can be found at www.hse.gov.uk/hoise

HML

HML is High, Medium and Low and is literally how the protector performs at high, medium and low frequencies. The values (attenuation level) of each will be found on the packaging of the hearing product you purchase. A SNR of 30 will not necessarily give a 30 decibel attenuation at all frequencies.

Rule of Thumb

When it is necessary to shout in order to be heard three feet away, the noise levels may be 85 decibels or more. Hearing protection must be made available to employees where sound levels are at or above 80 decibels, and strictly enforced where the sound levels reach or exceed 85 decibels.

Products comply to EN352.

Noise Thermometer

Sound Energy Doubles Every 3dB

160dB	Apollo Lift-off 188dB Immediate physical damage
140dB	Jet Engine Take-off 150dB Maximum allowable exposure
130dB	Impact Drill 130dB Immediate pain threshold
120dB	Oxygen Torch 121dB Short exposures at this level may cause hearing damage
100dB	Impact Wrench 102dB Extremely loud
85dB	Forklift 87dB Protection MUST BE PROVIDED above this level
80dB	Hand Saw 85dB Protection recommended for 8-Hour exposures above this level
75dB	Vacuum Cleaner 74dB Non-Hazardous

- Semi-Aural banded earplugs
- Day long protection
- Ideal disposable protectors for visitors
- 21db SNR
- Packed 40

124896

Buying Guide

Sound Levels/ Noise Meters

Part of your risk assessment should involve understanding the level of noise within your work environment. Sound measuring systems can be used to help employers/employees select the appropriate type of hearing protective equipment for use in areas of the workplace. The fitting of hearing protection products is just as important as establishing the total noise level.

Dispensers

An ideal solution for where hearing protection is required all the time at a fixed location within the workplace.

Foam Earplugs

Made from expandable slow recovery foam that helps provide the best combination of comfort and protection for most users. Typically foam plugs are rolled down prior to insertion where the foam plug expands to provide a snug and secure comfortable fit. Generally seen as a disposable product.

Moulded Earplugs

Made from flexible materials that are preformed to fit the ear canal. These reusable ear plugs are comfortable, hygienic and economical. Hygienic carrying case made available with some products.

Detectable Earplugs

Available to buy in either a foam or a moulded finish. The ear plug is fitted with a choice of detectable components (steel ball bearing or a non-ferrous filter) finished with a visible non food blue detectable cord. Hygienic carrying case made available with some products.

Banded Semi-Aural Earplugs

Can be finished in either a foam or moulded tip. Ideal for intermittent use as they are quick to put on and take off as well as being easy to store around the neck. They provide less protection than either plugs or ear muffs and are not usually recommended for continuous long-term wearing.

Ear Muffs

Ear muffs have rigid cups with soft plastic cushions that seal around the ears to block out noise. The cushions are foam filled which are seen to be lightweight and durable.

A. Economy Earplugs

- Self-adjusting to minimise pressure on ear canal and noise protection
- Conforms to EN352-2
- 33db SNR
- Packed 200

Head Protection

Workplace (Health, Safety & Welfare) Regulations 1992 require the provision of safety equipment from falling objects where the risk of falling objects or areas of restricted head space cannot be eliminated. Safety should be provided in the form of safety helmets or bump caps when working in restricted spaces where bump hazards are possible.

Standards - All safety helmets are CE marked and meet EN397 standard.

All Bump Caps meet EN812 standard to provide the wearer protection against the effects of striking head/scalp against hard or sharp stationary objects.

Helmet life - Helmets are designed to have an in-use life of up to 5 years from the date of storage removal. Excess wear and tear and extreme environments can considerably reduce the lifespan. In these cases it is recommended to replace every 6-12 months.

extremely high class CE marked hardhat with effective shock absorption!

Head Protection

Identifying Hazards

A safety helmet is required in almost every industry where there is a risk of being injured by falling objects. In areas of restricted head space where accidental bumping of the head could be involved (e.g. overhead piping) a scalp protector (bump cap) should be considered. Bump caps are not a substitute for safety helmets and must not be used to protect the head from falling objects.

Identifying Materials

Shells are primarily made using UV stabilised high density polyethylene (HDPE) or ABS (Acrylonitrile Butadiene Styrene). Harnesses are made using low density polyethylene or textile webbing.

Care and Maintenance

A helmet may be cleaned with soap and water, drying with a soft cloth. A helmet should not be cleaned with abrasive substances or solvents and must not be stored in direct sunlight or in contact with chemicals. The wearer should inspect their helmet regularly. Any helmet showing more than superficial abrasions or scuffing to the shell should be replaced.

Shelf Life

To comply with European Standards, all helmets are marked with the quarter or month and year of manufacture. If helmets are stored in boxes in which they were supplied and do not experience environmental extremes, the shelf life of a helmet is not limited. However, it is not recommended that a helmet should be in use five years after date of manufacture.

So What Are The Differences?

A helmet is not just a helmet. They have many different features providing specific user benefits, such as:

- Weight: Some helmets are lighter than others. A lightweight helmet may provide more comfort during prolonged periods of use
- Cradle: A helmet can have either a basic polyethylene cradle or a more comfortable textile webbing cradle
- Sweatband: A helmet can have either none, a standard or a high absorbent sweatband for improved comfort during use
- Ventilation: Some helmets are ventilated, providing cooling airflow during use
- Badging: Some helmet designs allow for a larger front badging area, for an enhanced corporate image
- Peaks: Peak lengths can vary – a reduced peak gives improved upward visibility
- Retro-Reflective Surfaces: Reflective surfaces that provide greater visibility of the wearer in low light conditions

A. Hard Cap

- Only bump cap to exceed the A1+ variant of EN812
- Sleek, low profile in two peak sizes
- Removable protective liner
- Unique one-handed angled adjuster, giving true 'one size fits all'
- Ventilated
- Reflective piping adds extra visibility

Eyewear Protection

Eye protection is a requirement under regulation 4 of the Personal Protective Equipment at Work Regulations 1992 when at risk in a hazardous area. Industry standard is EN166 for impact and offers various levels of protection, which are indicated. Employers must provide Personal Protection Equipment that has been tested and is suitable for the wearer and exposure to the hazard in question. Safety spectacles/glasses are intended to protect against low energy impact from flying debris and objects. They do not protect against gas or molten metal nor do they keep out dust. Safety goggles will offer protection against medium energy impact and high levels of explosive force. They can also protect against dust, gas and chemical splash if indicated. Safety faceshields offer full face protection against flying particles and chemical splash. They also remain mist-free through temperature changes.

Compatibility

Eye protection often needs to be worn in conjunction with other protective equipment such as head, hearing and respiratory protection and it is essential that comfort and fit with other PPE is maintained. Compatibility with other PPE will be subject to a number of variable factors which require the employer and end user to conduct an appropriate selection depending on individual needs.

Type of Eye Protector

Safety Spectacles

Comfortable and available in a variety of styles. Will not keep out dust, gas or molten metal.

Safety Goggles

Can provide protection for all types of hazards. May be worn over spectacles.

Safety Faceshield

Protects the face as well as the eyes, but does not keep out dust or gas. Comfortable to use for long periods.

European Standards EN 166

To assist you in your understanding of markings on Eye Protection Products covered by this Standard you should note:

Optical Standard:	Frame	Lens
Class 1: For continuous work	-	1
Class 2: For intermittent work	-	2
Class 3: For occasional work, but must not be worn continuously	-	3

Mechanical Properties:

Increased Robustness (General Purpose)	-	S
High Energy Impact (190m/sec)	A	A
Medium Energy Impact (120m/sec) Grade 1	B	B
Low Energy Impact (45m/sec) Grade 2 F F		
Increased Robustness – General Purpose		
Impact-Performance at Extremes of Temperature	T	T

Areas of Use:

Liquids (chemical)	3	-
Large Dust Particles	4	-
Gas and Fine Dust Particles	5	-
Short Circuit Electric Arc	8	-
Molten Metals and Hot Solids	9	9

Optional:

Resistance to Misting/Fogging	-	N
Resistance to Mechanical Damage (Anti-Scratch)	-	K

NB: The "A", "B", "F" and "S" markings on frame and lens represent tests carried out on each component and therefore may be different – in which case the lower level must be assigned to the complete unit when making an assessment.

Respiratory Protection

Under current legislation, employers are responsible for providing suitable personal protection to employees who need it when all other hazard factors have been eliminated, providing proper adequate selection, fitting and training in its use, maintaining the equipment in good order, keeping maintenance records, and replacing when necessary. Respiratory protective equipment may appear daunting, with multiple factors to consider; - the equipment needs to not only provide appropriate protection for the job, but also be comfortable enough for the individual user to wear during the whole period of exposure.

The selection of Respiratory Protection Equipment follows a basic steps method:

- Identify the hazards - dust, mists, metal fume, gas, vapour, etc
- Assess the risk - assess the hazard and exposure levels against safety standards and consider other protection requirements eg. skin and eyes
- Select the right respirator - disposable, half mask, full face, powered or airline
- Training in fitting and use - to optimise respiratory protection

FFP1 Respirators

APF 4

Low level fine dust/oil or water based mists (hand sanding, drilling and cutting). Identified by YELLOW straps.

FFP2 Respirators

APF 10

Moderate level fine dust/oil or water based mists (plastering, cement, sanding and wood dust). Identified by BLUE straps or valve lettering.

FFP3 Respirators

Higher level fine dust/oil or water based mists (hazardous pharmaceutical powders, biological agents and fibres). Identified by RED straps or valve lettering.

Classification explained

When currently used by a wearer who has passed a face fit test, an FFP1 respirator should reduce exposure to airborne particles by a factor of four, FFP2 by a factor of 10 and an FFP3 by a factor of 20.

A. JSP FilterSpec Spectacles & Goggles

- Stylish design with fully adjustable spectacle frame for maximum comfort and security
- One-piece lens offers optimal coverage
- Anti-mist and anti-scratch lens coatings as standard
- Disposable filter mask element for optimum protection
- Re-usable filter holder element for an economic PPE solution
- Exhale valve fitted for increased filter element longevity
- Each product comes supplied with three filter elements
- Spectacles have removable, replaceable elastic strapping

Your helpful Guide To Clothing

When considering the use of clothing to protect the wearer during a specific task or situation the following standards are in place where appropriate, which should ensure protection to a specified level.

CE levels of simple, intermediate and complex design for limited life clothing.

EN465 - Protective clothing

FN343 - Waterproof clothing

EN531 - Clothing for industrial workers exposed to heat, excluding fire fighters and welders

EN470 - Clothing for welding and allied processes

EN471 - High visibility clothing for use on roads, highways and rail

EN342 - Clothing for cold conditions

Your Guide to High Visibility Wear

Under the Roads and Street Works Act and in accordance with Chapter 8 of the Traffic Signs Manual 1991, all employers must provide the right protective clothing for their workers. High Visibility Clothing must be of standard BSEN471:1994.

Class ratings:

Class 1 offers the minimum level of protection required by any persons working on a private road or to be used in conjunction with a higher classed garment, incorporating a minimum of 0.14m² of background material and 0.13m² of retro-reflective material.

Class 2 is required for any persons working on or near A or B Class roads and delivery drivers, incorporating a minimum of 0.50m² of background material and 0.13m² of retro-reflective material.

Class 3 offers the highest level of protection and is required by any persons working on or near motorways, dual carriageways and airports, incorporating a minimum of 0.80m² of background material and 0.20m² of retro-reflective material.

A. High Visibility Vest

***Take a moment
with*** **PG** tips

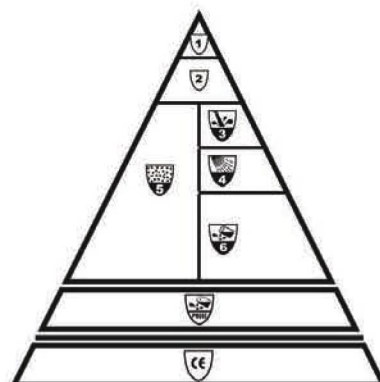

Selecting the right apparel

To increase productivity and cost-effectiveness, workers must be able to work comfortably and safely, being protected against a broad spectrum of possible hazards. Use the apparel selector in order to determine the right garment for the right task.

The selector is a guide only. It is the responsibility of the employer to make sure the apparel is suitable for its intended use. We suggest that you always check the latest version of KIMBERLY-CLARK PROFESSIONAL® product literature to get more information about the products or contact INFOFAX Service by emailing infofax@kcc.com.

European guidelines within CE Complex help users identify the correct garment for the task. This information enables you to decide which product is suitable for your use.

- Type 1** Gas tight clothing
- Type 2** Non gas tight clothing
- Type 3** Liquid tight clothing
- Type 4** Spray tight clothing
- Type 5** Particle protection
- Type 6** Limited splash protection

Our new Healthcare range

a single source solution for healthcare providers

We are acutely aware of the economic pressures facing the healthcare industry, so it is more important than ever that cost savings and efficiencies are achieved. This makes it essential for healthcare professionals to work with suppliers they can count on to deliver reliable services and quality products.

With our fast and flexible delivery service we can provide essential, non-medical supplies for the following industries:

- Hospitals
- Doctors Surgeries
- Vets
- Care Homes & Supported Living
- Community Centres & Trusts

From office supplies and catering & janitorial products, to health & safety and workwear & PPE, we have everything your organisation needs in one place, reducing the time and hassle you spend on procuring your supplies.

You can view a selection of our new Healthcare products on pages 281-286 or contact us for more information on our full Healthcare range.

Katrin Easy Pick

Now with enhanced pack opening so you can see what's left instantly

The Katrin Easy Picks are self-contained sleeves of hand towels which are highly mobile but always protected from moisture, dirt or germs.

The built in dispenser is easy to open and use; the new wider opening ensures that you never touch the inside of the pack thus eliminating cross contamination, and the new larger towel width gives a much larger drying surface area so one towel will always be enough.

You can find our range of Katrin towels and toilet tissue on page 83.
